                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          is a 4 transmembrane domain, 2 pore domain potassium channel. The gene is located on chromosome 19, determined via PCR chromosomal localisation using primers AAZ11939 and AAZ11940. K+Hnov cDNAs considered by extension of expressed sequence tags (EST9) which were related but not identical to known human potassium channels. Potential collegendent clones. Potassium channels have critical roles in various (cell types and biochemical pathways. Defective potassium channels are cknown to cause four human diseases: episodic ataxia with myokymia; cardiac arrhythmia (long QT syndrome); epilepsy; and Bartter's syndrome. CR As potassium channels are critical components of virtually all cells, ci is likely that abnormal potassium channels are also implicated in certain renal, cardiovascular and central nervous system (CNS) ci dentifying homologous or related proteins and the DNA sequences encoding them. They may be used to produce compositions that modulate the expression and function of the K+Hnov protein and in studying the CR biochemical pathways associated with it. They may also be used for the cepublicant production of k-Hnov protein in fermentation cultures. CR Additionally, such nucleotides may be used in gene therapy protocols for the treatment of diseases associated with abnormal potassium channels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents the human K+Hnov59 potassium channel.
K+Hnov proteins have a high degree of homology to known potassium channels and may be alpha subunits, which form the functional channel, or accessory subunits that act to modulate the channel activity. K+Hnov59
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                         361
                                                                                                                                                                                                                  301
                                                                                                                                                                                                                                                                   301
                                                                                                                                                                                                                                                                                                                                                                                                                                 181

                                                                                                                                                                                                                                                                                                                                           This sequence is the h-TREK1 polypeptide, encoded by the h-TREK1 polypucleotide AAZ00039. h-TREK1 is a two pore potassium channel, and the gene maps to human chromosome 1q32, between the markers D1S237 and WI5105. The polypucleotide sequence of h-TREK1 can be used to diagnose a disease or susceptibility to a disease related to expression or activity of h-TREK-1 polypeptides. The methods of diamnosis may be used in the treatment of diseases including cancer, pulmw.nary, cardiovascular, and inflammatory diseases, pain, psychiatric disorders including depression and schizophrenia, neurodegenerative diseases including Alzheimer's,

                                                                                                                                                                                                                                                                                                  2P domain potassium channel family of proteins which play a part in the control of resting membrane potential. Modulation of these channels will therefore affect neuronal excitability, thereby leading to a modulation of neurotransmitter release and activity of neuronal networks. Such modulation therefore may be useful for the treatment of certain neurological conditions such as anilance.
                                                                                                                                                                                                                                                neurological conditions such as epilepsy, sleep-related disorders, cognitive dysfunction, attention deficit disorder, addiction, anxiety/phobia, Parkinson's and Huntington's chorea, cerebral palsy, incontinence, erectile dysfunction or alopecia.

              This sequence is the mouse h-TREK1 polypept! . encoded by the h-TREK1 polypucleotide AAZ00040. h-TREK1 is a two per potrassium channel. The polynucleotide sequence of h-TREK1 can be used to diagnose a disease or susceptibility to a disease related to expression or activity of h-TREK-1 polypeptides. The methods of diaments may be used in the treatment of diseases including cancer, puln cary, cardiovascular, and inflammatory diseases including cancer, polipers including depression and schizophrenia, neurodegenerative diseases including Alzheimer's, stroke, and head trauma and neurological dispreces including migraine.
                                                                                                                                                                                                                                                                                                                                                                           h-TREK1; two pore potassium channel; inflamma .ry disease; chromosome 1q32.

                               The present sequence represents a mechanically sensitive potassium channel protein designated TREK-1. The protein is activated by polyunsaturated fatty acids, particularly arachidonic acid, and by riluzole. The protein is used to screen for specific modulators which are useful for treating or preventing diseases of the heart and nervous systems in humans and animals, e.g. epilepsy, cardiovascular disease (arrhythmia), neurodegeneration (particularly where associated with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAY94426 standard; Protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       schizophrenia, neurodegenerative disease including Alzheimer's, stroke and head trauma and neurological disorders including migraine and epilepsy. The present sequence is human h-TRAAK protein #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    imbalance and for identifying agonists and antagonists of h-TRAAK polypeptides. The h-TRAAK polypeptides and polypucleotides may also be useful for treatment and prevention (e.g. as vaccines) of certain diseases, such as pain, psychiatric disorders including depression and diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Functional genomics was used to identify h-TRAAK polypeptides and h-TRAAK polynucleotides from human tissue samples. h-TRAAK polypeptides have homology to the 2P domain potassium channel family polypeptides. The h-TRAAK polypeptides and polynucleotides may be used in diagnostic assays for conditions related to h-TRAAK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim
                                                                                                                                                     03-NOV-1999;

The h-TRAAK polypeptides and polynucleotides may be used in diagnostic assays for conditions related to h-TRAAK polypeptides. The h-TRAAK polypeptides and ant.qonists of h-TRAAK polypeptides. The h-TRAAK polypeptides and polynucleotides may also be useful for treatment and prevention (e.g. as vaccines) of certain diseases, such as pain, psychiatric disorders including depression and schizophrenia, neurodegenerative disease in golding Alzheimer's, stroke and head trauma and neurological disorders including migraine and epilepsy. The present sequence is human h-Treak protein #2.
                                                                                                                                          Mechanically sensitive potassium channel protein: TRAAK; polyunsaturated fatty acid; arachidonic acid: iluzole; heart disease; nervous system disease; epilepsy; cardiovasculur disease; arrhythmia; neurodegeneration; ischemia; anoxia; hormone coretion abnormality;

The protein is activated by polyunsaturated fatty acids, particularly arachidonic acid, and by riluzole. The protein is used to screen for specific modulators which are useful for treating or preventing diseases of the heart and nervous systems in humans and animals, e.g. epilepsy, cardiovascular disease (arrhythmia), neurodegeneration (particularly where associated with ischemia or anoxia), abnormalities of hormone secretion and muscular disease. The protein itself may be used to treat these diseases. Antibodies specific for the protein are used to detect it in tissues, also as therapeutic inhibitors or activators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a mechanically sensitive potassium channel protein designated TRAAK. The protein is activated by

The polynucle; de sequence of h-TREK1 can be used to diagnose a disease or susceptibility to a disease related to expression or activity of h-TREK-1 polypeptides. The methods of diagnosis may be used in the treatment of diseases including cancer, pulmonary, cardiovascular, and inflammatory diseases, paid, psychiatric disorders including depression and schizophrenia, neurod generative diseases including Alzheimer's, stroke, and head trauma and neurological

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ъ
                                     TASK1 (see AAY79674). TASK2 is a unique pot ssium transport channel that is regulated by external pH, and is pro luminantly expressed in kidney and epithelial tissues. The invention relates to: identification of the native renal channel with the properties of TASK2; identification of potent pharmacology that specifically modulates the activity of the TASK-2 channel; localizing K+ channels comprising the TASK2 subunit in vives and the generation
                                                                                                                     The present sequence is that of human TASK2 (TWIK-related acid-sensitive potassium channel 2), a novel member of the 2P domain potassium channel family that also includes !WIK-1 (see AAY79673) and
                                                                                                                                                                                      New nucleic acid encoding a non-inactivation outwardly rectifying potassium transport channel, designated TASK, useful in the treatof hypertension or dysfunctions of the kidne, liver or pancreas
                              of mice in which the TASK2 gene has been in privated.
                                                                                                                                                                                                                                                      WPI; 2000-376487/32
